**DETAILED ACTION**

***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-9, drawn to a method for detecting moisture, classified in class 73, subclass 335.05;
- II. Claims 10-14, drawn to an organic luminescence display device, classified in class 313, subclass 504;
- III. Claims 15-20, drawn to a moisture detector, classified in class 73, subclass 29.05.

Inventions Group I and III are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the process as claimed in Group I can be used to make a different invention such as a display incorporating plasma emission.

Inventions Group II and Group III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention Group I has separate utility such as use in a display device that incorporates light emission by means other than organic luminescence, such as plasma emission. See MPEP § 806.05(d).

Art Unit: 2879

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group II or III is not required for Group 1, restriction for examination purposes as indicated is proper.

A telephone call was made to Edward Lynch on 10/13/05 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
